

PEDIATRIC SPECIAL NEEDS ASSESSMENT REPORT

Inspirability Integrated Care & Support System

Patient Name	Youssef Ahmed Hassan	File Number	INS-2026-0471
Date of Birth	14 March 2014	Age	12 Years
Gender	Male	Blood Type	O+
Height	146 cm	Weight	42 kg
Assessment Date	13 May 2026	Prepared By	Dr. Mariam El-Sayed

Parent / Guardian Information

Guardian Name: Ahmed Hassan Mohamed

Relationship: Father

Phone Number: +20 101 458 7741

Address: Nasr City, Cairo, Egypt

Medical Classification & Clinical Summary

Primary Diagnosis: Autism Spectrum Disorder (ASD) – Level 2

Secondary Findings: Moderate Speech and Language Delay

Severity Classification: Moderate Functional Support Required

Date of Initial Diagnosis: 22 September 2018

Diagnosed By: Pediatric Neurology Department – Cairo Children's Specialized Hospital

Current Medications: No long-term medications currently prescribed.

Known Allergies: No known drug allergies.

Clinical Notes

- The patient demonstrates challenges in social communication and verbal interaction.
- Mild sensory sensitivity observed in crowded and high-noise environments.
- Attention span improves significantly with structured educational activities.
- The patient responds positively to visual learning techniques and supervised group activities.
- No history of epilepsy or severe motor impairment reported.

Recommended Support Plan

- Speech and language therapy sessions (2–3 times weekly).
- Occupational therapy focused on sensory integration.
- Enrollment in an inclusive educational environment with individualized support.

- Participation in supervised swimming or non-contact sports activities.
- Behavioral therapy focused on communication and emotional regulation.

Educational Information

Current Educational Status: Enrolled in Grade 5 at Future Horizons Inclusive School.

Preferred Learning Style: Visual and activity-based learning.

Support Required: Small classroom groups, structured routines, and supervised academic assistance.

Sports & Physical Activity Recommendations

Recommended Activities: Swimming, walking, light fitness training, and supervised team-building activities.

Activities to Avoid: High-contact sports or activities involving excessive sensory stimulation.

Professional Assessment Summary

Based on the current medical and developmental evaluation, the patient requires moderate multidisciplinary support including educational, speech, and behavioral intervention services. Continued monitoring and structured developmental support are strongly recommended to enhance communication skills, adaptive behavior, and overall social integration.
